Applicant

### ELECTRONICS AND TELECOMMUNICATIONS RESEARCH INSTITUTE et al

- 1. The applicant is hereby notified that International Preliminary Examining Authority transmits here with the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report(but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details in the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

### 2. Citations and explanations (Rule 70.7)

The claimed invention is an apparatus for controlling the backlight of a liquid crystal display and for processing visual signals.

D1: JP 10-20277 A D2: JP 11-305197 A

D1 discloses a device comprising: plural sensors detecting the light quantity of a backlight; a variable power supply; and a controller. The difference to the claimed invention is that in D1 plural sensors detect the light quantity of a backlight provided on the back surface of the display part and the display part is finely controlled with respect to ambient brightness, whereas in the claimed invention, the backlight intensity information is adjusted to reduce power consumption.

In Claims 1 and 5 of the present invention, the brightness and the contrast of the visual signal are also adapted based on the backlight intensity information. However, as different in D1, the backlight intensity information is adjusted to reduce power consumption and to adapt the brightness and the contrast of the visual signal based on the backlight intensity information.

Therefore, the invention, as claimed in Claims 1-8, is considered to be novel and to involve an inventive step.

The invention, as claimed in Claims 1-8, is considered to be industrially applicable.
